Flatiron Health

Senior Software Engineer, Tech Lead - 2017 to Present

- Lead the technical transition of a monolithic AngularJS frontend to React, including building interoperability tools for incremental migration, mitigating rollout risk, and establishing best practices for a team unfamiliar with React.
- Close partner with Design and Product to scope, estimate, and effectively deliver projects as a team while maintaining a high bar for technical excellence.
- Responsible for defining and prioritizing the long term technical roadmap to increase the velocity and stability of the software development lifecycle.
- Secondary engineer for implementing role based access controls for storing and manipulating protected health information in an existing application.
- Full stack individual contributor for a variety of projects, working directly with stakeholders to scope and ship effective feature work.
- Lead company-wide hackathons with 200+ participants each quarter.

Product Design & Development

Independent Storefront - 2019 to Present

Independently designed and fulfilled print product design.
store.cpimhoff.com
